TOTAL DEFROST

Giorgio Taglioni 11/05/2024.

For proper thermodynamic operation of the equipment, a manual Total Defrost operation must be performed every 15 days (Max 30 days). (N.B. As indicated in the User's Manual that can be downloaded via QRCode)

Following is the procedure:

- Remove all the product contained in the showcase.
- Start the procedure by pressing on the touch panel of the control unit the symbol (Total Defrost).

Once the procedure is started, the display case restarts the controls (**C-2** will appear in the display to indicate the start of the procedure) and will remain in operation with a set of +18°C allowing the ice formed inside to melt completely.

Total Defrost operation should last min. 8h - max. 12 hrs.

End of the Total Defrost Procedure:

At the end of the indicated minimum defrosting hours and having verified that the accumulated ice is completely melted, the operation can be terminated by pressing the Total Defrost button again

The controller will restart in "**C-1**" mode, and the set will automatically return to -18°C, starting the normal operating cycle of the equipment.

N.B. You can now reload the product in the showcase while respecting the loading limits given in the Manual.
